### Yummy scrummy Garlic and Shallots - so easy to grow

#### Garlic

Garlic is one of the easiest crops that you can grow. If ever there was a case of plant and forget, then this is it!

Plant garlic in winter and harvest in summer. Plant into a well-

drained soil in a sunny position. Dig in generous quantities of compost and add general garden fertiliser and lime before planting. Break the bulb into individual cloves taking the largest cloves from around the outside of the bulb — discard the smaller ones or use in cooking. Plant cloves with the narrow end up, so they are just covered — approximately 2-5 cm deep.

Keep the area weed free and if conditions are dry, keep watered. Reduce watering one month before harvest to improve the keeping quality. If flower stalks appear, remove them as this will reduce the size of the garlic bulbs when harvested. Garlic is also fine grown in pots.

Don't plant garlic purchased from the supermarket - it possibly has been treated with a retardant to stop the bulbs from sprouting. GardenPost garlic bulbs are NZ grown and have not been treated – they can be planted or eaten fresh.

### Shallots

Discover the joy of cooking with fresh shallots. One of the easiest members of the onion family to grow, shallots not only mature faster but require less space than their counterparts. Plant whole shallot bulbs in autumn and winter in well-drained rich soil, but not where you have grown onions, garlic or leeks before (otherwise your shallots could get nasty diseases). Do not plant them too deeply.

Once established keep them well-fed with nitrogenous fertilizers and well watered if the soil gets dry. Harvest shallots when the leaves turn yellow. It's as easy as that!

GardenPost shallots are NZ grown. They need to be planted right now - very limited stock so order quickly.
